**Sharla Riead.** Ms. Riead's energy and environmental experience began with her first energy audit in 1979 and spans years of progression from working as an energy auditor through construction and installation of solar panels to directorships and management of energy conservation and consulting companies and culminates in her leadership of **Hathmore Technologies, LLC**.

Coming from a long line of women entrepreneurs, and with a strong social conscience and interest in alternative energy and energy conservation; Sharla started her company, performing on-site energy inspections and providing customers with punch-lists of improvements that could be made to improve the energy efficiency of their homes and lower their utility bills. For over four decades she has performed heat load calculations, residential energy diagnostics, solar and alternate energy design, energy conservation instruction, contracting and consulting. As a Certified Building Analyst and Envelope Specialist, Sharla assisted hundreds of homeowners with energy retrofit improvement analysis and design. As a Certified Home Energy Rater, Ms. Riead and her team provides testing, certification, and program compliance services for national energy and environmental programs such as ENERGY STAR, NAHB Green Build, US Green Building Council's LEED® for Homes Program and Federal Energy Tax Credits. Sharla and her company have supported several hundred builders with their Green Building goals.

In 2008 Sharla decided to share her building science expertise and expand the impact of her knowledge and abilities. She started the **Accurate Rater Network** and qualified her processes, programs and training to provide national certification, quality assurance and program oversight for the Building Performance Institute, the Residential Energy Services Network, US Green Building Council and other national and local programs. As a training provider, her **EnergySmart Institute** creates and provides online and classroom training and curriculum for green construction, sustainable technologies and energy and environmental courses. Her desktop and mobile tools, **REMCollect** and **REMCheck** provide automated data gathering, energy modeling and quality assurance for residential energy efficiency programs.

Ms. Riead is a recognized leader in the fields of renewable energy, sustainable technology, energy efficiency and green construction. Hathmore Technologies, LLC is a Small Business Enterprise (SBE), a Woman-owned Business Enterprise (WBE) and a Disadvantaged Business Enterprise (DBE).
